SEO for Jobs

SEO for Jobs – Brief Profile

SEO for Jobs is the first service provider on the German market specializing in Google for Jobs. Using the software solution of the same name, job postings are published, analyzed, and optimized on Google for Jobs. No changes to the client's website are required.

New technologies—such as Google for Jobs—can turn entire industries upside down almost overnight. At the same time, however, these technologies are often complex and difficult to access.

SEO for Jobs has made it its mission to make Google for Jobs easily accessible to everyone. Over the past 15 years, Alexander Meirowski and Patrick Schmidt—the founders of SEO for Jobs—have gained extensive experience in software development. All of this expertise is now incorporated into their latest software product, SEO for Jobs.
